

TANK CLEANING & NORM DECONTAMINATION

TANK AND VESSEL CLEANING

TECSEP has entered into a partnership with M-I Swaco for the provision of tank cleaning services in the Angolan Oil and Gas Industry. Our combined vast experience in the Oil and Gas industry allow us to be the leader in the Angolan market today.

Our trained and experienced staff guarantee an effective and efficient solution to all industrial cleaning requirements, whether hazardous or non-hazardous. Our extensive equipment base and our facilities in Luanda, Cabinda and Soyo, enable us to safely carry out even the most hazardous procedures. Full time dedicated safety personnel ensure safe working procedures and policies are adhered to at all times to avoid accidents in the workplace.

TECSEP has a range of technologies and methods using tank cleaning heads, vacuum transfer systems and other pumping solutions to clean tank and vessels remotely or with minimum man entry. Platform systems such as gas coolers, exchangers and slug catchers can usually be cleaned using remotely operated jetting systems which simultaneously increases efficiency and safety.

For larger tanks and vessels such as production separators, surge tanks or crude oil storage tanks, man entry is, at times, required to facilitate cleaning during ad-hoc cleaning programs or full shutdowns. In this scenario, TECSEP's service offering includes tank management and emergency response teams using certified vessel entry safety equipment area and personal gas monitors, low voltage ex-rated lighting and LP BA 'Tetra Air' compressor systems.
