

SPECIALITY INSPECTION SERVICES

WATER BLASTING

TECSEP's High-pressure water blasting services is ideally suited for a vast array of applications, ranging from mill scale build-up, paint or sludge removal from reactors, condensers, tanks, evaporators, heat exchangers, boilers, process piping, cyclones, smelt beds, clarifiers and critical operating systems. Customized tooling allows our trained operators to safely clean where personnel are not permitted.

Covering a broad scope of water-blasting services, TECSEP owns and operates water jetting units and compatible specialized accessories capable of various pressures and flows. Our units operate from pressures of 1,450 psi to 15,000 psi and, we take pride in tackling the most challenging high-pressure water blasting projects.
